Re: Application for Full Stack Intern Role

Dear Hiring Manager,

I'm writing to apply for the Full Stack Intern position. As a third-year B.Tech student in Artificial Intelligence & Data Science at GGSIPU (USAR), I bring strong, hands-on experience with the Next.js/React side of your stack, along with the backend fundamentals and fast learning curve needed to grow quickly into the Java/Spring Boot requirements.

On the frontend, I've built and shipped multiple production-style applications in Next.js and React — including a real-time collaborative drawing app (Canvas API, WebSockets, JWT auth, PostgreSQL via Prisma) and ChitChat, a real-time chat/video platform built with WebRTC and Socket.io. I'm currently building OffGrid, a full-stack Next.js 14 marketplace application as a co-founder, where I've designed the complete architecture myself — role-based onboarding, authentication (NextAuth with Google OAuth), payments (Razorpay), media handling (Cloudinary), and a PostgreSQL (Neon) schema for a three-sided marketplace. This has given me direct, practical experience with REST API design, database schema design, and auth/authorization flows — the same core concepts your backend requirements are built on, just translated from Java to JavaScript/TypeScript so far.

I'm comfortable with Git/GitHub workflows and Postman for API testing from my project work, and I'm actively expanding into Java and Spring Boot to round out my backend skill set, since I understand REST API development, database optimization, and secure authentication patterns conceptually and want to apply them in a Java environment. I learn fast in hands-on settings — as Lead of my college's i3 Web Development Club, I regularly pick up new stacks to mentor others and ship club projects under deadline pressure (including co-organizing the AZINHACK hackathon).

I'd welcome the opportunity to bring my frontend strength and product-building mindset to your team while growing into the Java/Spring Boot side under your guidance. I'm available to discuss further at your convenience.

Thank you for considering my application.

Best regards,
Mayank
